New versions of the Willamette River watershed databases have been posted to the NOAA FTP server. The files are located in the folder named -  
/ARD/Query\_Manager/Data\_Files\_zipped/Willamette\_PH

Two new studies have been added to the database from the Osprey Egg data:  
StudyID Ao: Round 3/Injury Assessment Osprey Eggs (Axys PCB and dioxin/furan data on 10 eggs)  
StudyID Ap: Injury Assessment Osprey Eggs (GLIER PCB/OCP/Hg data and Carleton PBDE data on all eggs)

The study notes have extensive detail on the decisions made during data processing.

Regarding the final QA Category, I called Sandy from Integral, and because the Carleton data were unvalidated, they received a code of NACat1. Thus the final QA Categories for these data are:

GLIER Org+Hg (Validation Level = Summary) QA2Cat1  
Axys (Validation Level = Full) QA2Cat1  
Carleton (no Validation) NACat1

There are 3 new files which have been uploaded -

WR101208.zip - all available Willamette River data

WRCat1\_101208.zip - "Nature and Extent" data set represented by all chemical data classified with "Cat1" in the chemcat field  
(Includes all of the new data)

WRQA2Cat1\_101208.zip - "Risk" data set represented by all chemical data classified with "QA2Cat1" in the chemcat field  
(Includes all but the Carleton PBDE data)

The chemistry dictionary has also been updated and posted to the server, so this database should be used with the dictionary tables from the Dict101208.zip.

Thanks,

Peggy
